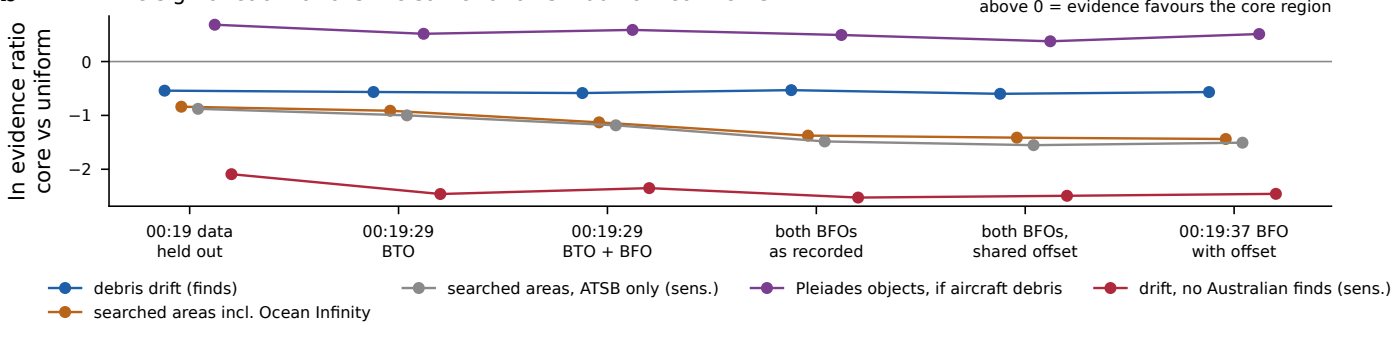
a Each evidence type alone against the core, and its influence on all evidence (00:19 data held out)

evidence	median alone (deg)	ln evidence ratio, core vs uniform	Bhatta-charyya, core vs alone	core mass in alone 90 % HPD	alone mass in core 90 % HPD	median shift, alone - core (NM)	KL when removed from all	share of all KL	median shift on removal (NM)
debris drift (finds)	-28.2	-0.54	0.44	0.71	0.13	+713	0.30	0.30	-94
searched areas incl. Ocean Infinity	-23.9	-0.84	0.33	0.47	0.06	+1019	0.50	0.51 *	-84
searched areas, ATSB only (sens.)	-25.9	-0.88	0.35	0.40	0.07	+881	0.48	0.48	-142
Pleiades objects, if aircraft debris	-35.3	+0.68	0.44	0.12	0.89	+166	1.35	0.56 *	-67
drift, no Australian finds (sens.)	-26.5	-2.09	0.24	0.08	0.02	+832	1.44	0.62 *	-382
hydroacoustics	-	0 (no data)	-	-	-	-	0	0	0

b The sign of each ratio is the same for all six 00:19 treatments



Plain English. Searched areas include the Ocean Infinity searches of 2018 and 2025-26, whose coverage is inferred from published maps and vessel tracks. "Alone" means the evidence with every position on the 7th arc equally probable before it. The ln evidence ratio compares how well this evidence agrees with the core result and with a position anywhere along the arc: below 0, the evidence prefers other parts of the arc. The Bhattacharyya value is 1 when two PDFs are the same and 0 when they do not overlap. KL removed from all: how much the all-evidence PDF changes when this evidence is removed. * = more than half of the change that all the evidence makes to the core. Pleiades and the Australian term are conditional or sensitivity results. A conditional PDF carries no Bayes factor.

Technical. Run J, four strata by core P(family), cell D0 total q=1/3 (C2 silent); D3/D4 waypoints from the both-burst supplementary pass. ln ER = ln E_core[L_E] - ln E_U[L_E], U = uniform per NM of 00:19:29 arc position (40.6-11.8 S), same end-of-flight model; not-computed rows carried at each base's own mean. KL(all||all-E) = E_all[ln L_E] - ln(Z_all/Z_all-E); all = core x drift x searches (unconditional) or x Pleiades (conditional on H). HPD on the 769 km2 equal-area grid. Drift 50 km kernel, two ocean models jointly with Pleiades; searches rho 0.05 at the impact point, ATSB + OI 2018 + OI 2025-26 (Ocean Infinity coverage inferred (grade C), included as best estimate; ATSB-only row = sensitivity); Australian term reconstructed (post hoc). Hydroacoustics 0 (no P_D).
