

Plain: Grey shows where the aircraft hit the sea if the sound came from the impact, for each of the two reception times. Green shows where Ocean Infinity searched the seabed in 2018; this area is taken from maps and ship tracks, not official data. Tan shows depth surveys only; they do not find wreckage. No ATSB sonar search reached this area. Haixun 01 is a sensitivity case.

Technical: run J impacts (4 strata by core P(family)), 00:19 data held out, cause q=1/3 (C2 silent); weights x pre-registered acoustic likelihood (c 1.48 km/s, sigma_b 0.5 deg core); end-of-flight physics not calibrated; impact point, no settling. OI 2018 = MH370-CAPTION tracing (grade C); Phase 1 bathymetry GA ga/100315 and 30 m backscatter ga/83922 coverage polygons (grade A). ATSB Phase 2 north limit 32.7 S; Bluefin-21 21 S; OI 2025-26 34-36 S.
