
Probability density of the impact latitude on the 7th arc from the drift model alone (twelve items, two ocean models with equal weight, prior uniform along the arc, smoothed along the arc), with and without the Mossel Bay item and with and without the absence of finds on Australian coasts, against the satellite communication and flight data (grey area; Davey model with the fuel model; no measurement at 00:19 used). Australian coasts: detection on populated Australian coasts 0.25 of that on the find coasts. Medians (degrees south): satellite and flight data 36.4; drift model 30.0; with no finds on Australian coasts 29.5; excluding Mossel Bay 32.9; excluding Mossel Bay with no finds on Australian coasts 31.4. Disagreement with the satellite and flight data (standard deviations): 1.6; 1.8; 0.8; 1.4.
