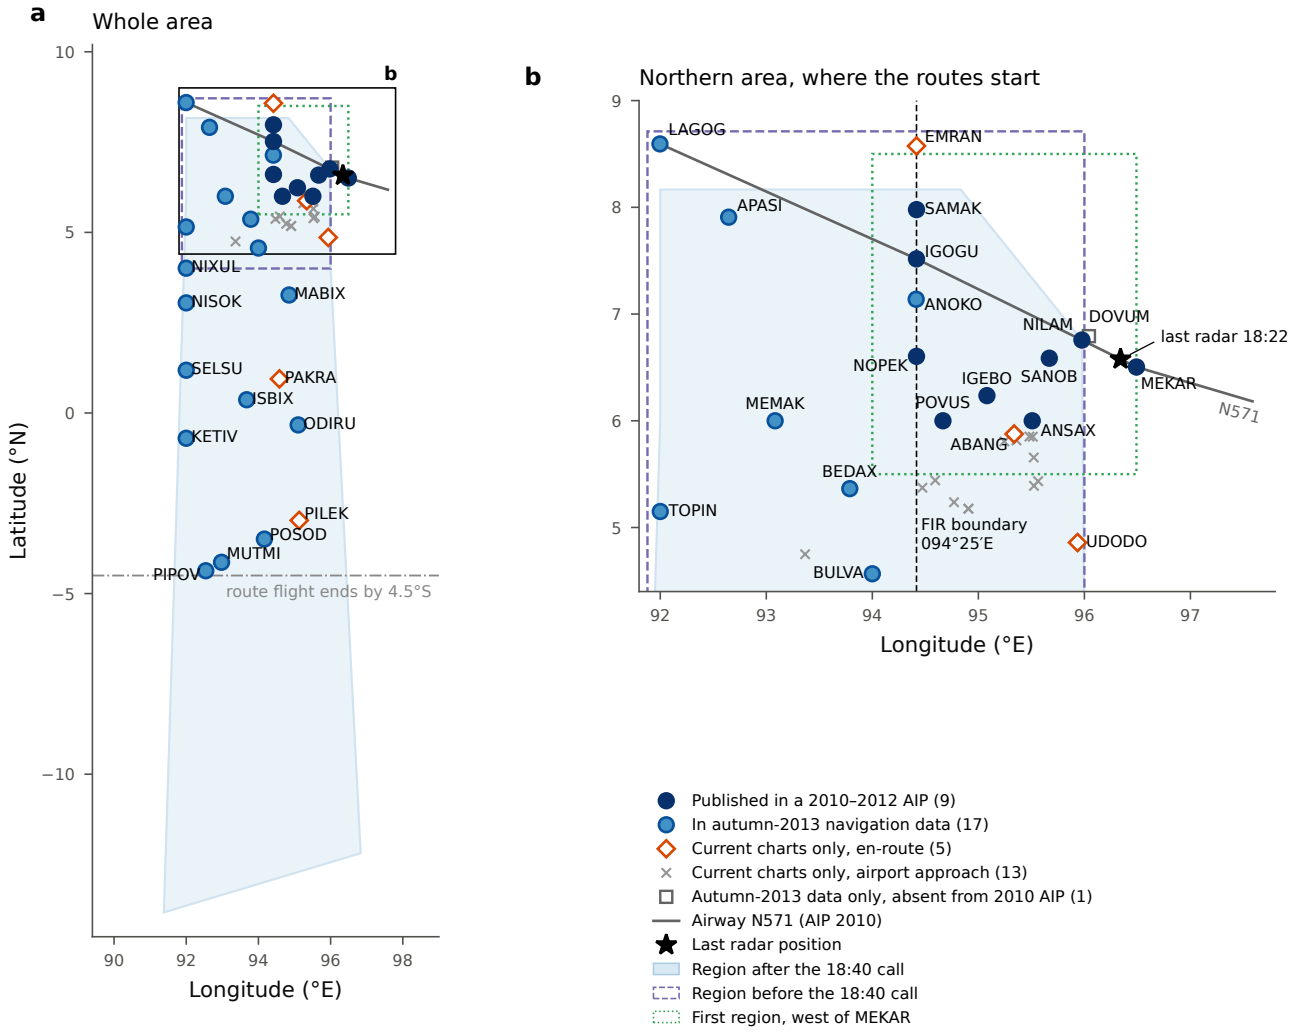
Fixes valid in March 2014 that the route sampler can use



Plain version: The marks show the named points that aircraft could fly to in March 2014. Dark dots come from Malaysian or Indian air navigation documents of 2010-2012. Blue dots come from navigation data of autumn 2013. Orange and grey marks are on current charts only; we cannot show that they existed in 2014. We propose to sample routes through the dark and blue dots only (26 points). The shaded and outlined areas are the areas that Pete specified for the three parts of the early flight.

Technical version: Tier A, AIP Malaysia ENR 3.3 AMDT 2/2010 (03 Jun 2010), AIP SUP 36/2008 / AMDT 3/2011, India AIP effective 1 Apr 2012 (SAMAK, IGOGU). Tier B, R. A. Peel fix.dat/awy.dat cycle 2013.10 (build 20131334; FlightGear fgdata). Positions in two or more sources agree to 0.012 NM or better, except ANOKO, 0.222 NM (2013.10 value adopted). Tiers C and D, Drive waypoint_catalog (AirNav Indonesia AIP AMDT 107-143, 2021-24; India ENR 4.4 AMDT 01/2018). DOVUM is on N571 in 2013.10 but not in the 2010 AIP (VAMPI-MEKAR-NILAM-IGOGU), so it is treated as stale. EMRAN and IVRAR are absent from 2013.10; 4N 96E replaces IVRAR. Region after the 18:40 call: engine/data/sampling-region-phase3.csv (7 vertices). Region before it: 10 NM NW of LAGOG to 4N 96E. First region (5.5-8.5N, 94E to MEKAR) is core's reading of 'west of MEKAR'. No run uses this table yet.
