

Ocean-product choices move floated classes by $\leq 19\%$, dense ones by $\leq 2\%$; seabed and density by $< 0.5\%$

(a) dot = reference-289 p50-latitude impact point 36.875 S, 89.125 E; line = range over four points (reference-289, end of flight's sweep, option none/other: p10 and p90 latitude, densest 0.25° cell; dive class and Boeing glide PROVISIONAL-OVERNIGHT).
(b) median over the four points of variant ÷ baseline at matched draws 0-511; printed where $\geq 5\%$ from 1. Baseline: GLORYS12V1 column and surface current, ERA5 wind, AusSeabed/GEBCO.
Breakup table PROVISIONAL (educated estimates); baseline 1,024 draws per point and family.
