
(i) The chart shows when a sound from the place on the bearing would arrive at each station. The time comes from the Cape Leeuwin time and the distance. No flight data is used. Hatched boxes show what was searched before. The old search used a wrong point. Triangles are times that another author found.

(ii) Source: sea-level 7th arc from R600 BTO 18,400 us (ephemeris m0019a) crossed by Kadri's 306.18 deg H01W bearing (25.732 S 101.369 E); no posterior used. t_X = t_H01W + (d_X - d_H01W)/c, c = 1.48 +/- 0.015 km/s, pick 5 s, 1.96 sigma; bearing +/-0.5 deg and BTO +/-63 us re-solved. Physics: geodesic, no TL; search case n/a; ocean model none. Royer picks: LDO-201608 Table 5 (UTC as printed). Excluded: NE-AMS (lost), H08N, Portland, Scott Reef (blocked).
