

R600 only, BFO as observed: arm V2 (anticipatory + fuel-cue + flame-out onset) from the 22:41 hand-off (SMOKE). Panels use different data: never evidence-mixed.

Runs: eof-2241-tr-v2-s1, eof-2241-tr-v2-s2 (terminal stage on core run 'reference-289', hand-off m2241 from runs/snap289-m2241). Prior track 289.7° (sd 1.0°) from 2014-03-07T18:01:49Z. Configs: davey2016.toml + no-exhaustion-prior.toml + reference-snapshots.toml + reference-289.toml + snapshot-m2241.toml + terminal.toml + options-m2241.toml + children-2.toml + arm-v2.toml + descent-idle-floor.toml + trace-sample.toml. 2 seeds, 100,000 parents/seed x 2 children x 4 descents = 1,600,000 descents; BFO models inflated, no-offset, startup-offset; 24 module families (propulsion x control x profile shape). Panels: r600_no-offset__other; r600_no-offset__fuel-exhaustion; m0011+r600_no-offset__other (option__log-on cause). HPD from a 0.02° weighted histogram smoothed 0.1°, equal weight per seed. Code 9fdad5fb-dirty. Labels: SMOKE; UNCORRECTED FUEL; PROVISIONAL SAMPLER. R600 'as observed' = BFO model no-dfset (182 Hz at face value); R600 BTO corrected 18,400 us. In-stage 23:15/00:11 scoring per core request 14. ICAO EEDB Trent 892 idle floor. Point-mass descent; PROVISIONAL dive class; Boeing-calibrated glide band. All three panels < 1,000 effective impacts: NOT ESTIMABLE from 22:41 (the converged R600-as-observed PDF is the 00:11 hand-off figure).
