

Where the wreckage rests on the seabed, under four impact PDFs (reference-289): settling barely widens the impact PDF

Grey: seabed wreckage PDF (settled mass-weighted; real ocean: GLORYS12V1 column and surface current, ERA5 wind, AusSeabed/GEBCO). Dashed orange: impact PDF, all impacts at full weight. End of flight eof-289-full-s1..4, prior track 289.7°; dive class and glide PROVISIONAL-OVERNIGHT; breakup table PROVISIONAL. Systematically resampled impacts, one settling draw each (200,000 in a, 40,000 in b-d); 0.02° grid, Gaussian 0.1° (6 NM), HPD levels on the smoothed density. Log-on cause fuel-exhaustion = end of flight's log-on lag density.
