
What the chart shows: for each receiver, the span of recording time that should be requested so that it covers every credible arrival of the impact sound, whichever way the 00:19 satellite data are used. Scott Reef is far from every credible impact and carries no information; it is kept as a declared row. No detection is claimed; levels are not calibrated (caveats C1, C2).

Technical: run J + northern supplement, p = 0.5 (ticks: p = 0, 1); union over options with Kish ESS >= 1,000 of [q0.5 - 10 min, q99.5 + 20 min], start floored and end ceiled to 5 min; tails flagged UNCONVERGED (> 5 min seed spread of q0.5/q99.5 over the 24 waypoints seeds) are widened to the seed envelope first. SOFAR c ~ N(1.482, 0.006) km/s; AGW c ~ U(1.40, 1.50) km/s (assumed). PREDICTIVE, NOT CALIBRATED; C1, C2. prereg bc99b07.
