

Where the wreckage is on the seabed, for each set of evidence

Grey: 90 % region of the wreckage. Colour: 50 % region. Dashed line: 90 % region of the impact point.

Primary case: 00:19 transmission range used

Comparison case: 00:19 transmissions not used

PIPELINE TEST - NOT CONVERGED (core (b) split-half). The areas show where the wreckage is possibly on the seabed. The right half is correct only if the Pléiades objects are aircraft debris. The wreckage moves very little in the water, so the seabed areas are almost the same as the impact areas. In the top row there are not sufficient samples for a result. Do not use these maps for a search.

Technical: settling core-set run on core (b) (settling 5b595bf, wider GLORYS12V1 column 75-115 E, 45-10 S; breakup table PROVISIONAL; constraint 'unpowered'), one draw per resampled impact (R600 BTO Only 40,000; Held Out 200,000), reweighted by composed / sampling weight (composer pass 1; constraint +alive; strata by 00:19-re-weighted P(family)). Composed factors: EoF 3c6319f (descent <= 6,500 ft/min, PROVISIONAL), drift GLORYS12 50 km (GlobCurrent excluded, audit F1), stand-in L_hyd, Pléiades rating 5 GLORYS12, searches Phase 2 + Bluefin-21 rho 0.05; not-computed rows carried at the mean. 0.02 deg grid, Gaussian 0.1 deg, HPD; afloat pieces excluded. ESS = Kish ESS of the reweighted resample; below 1,000 not estimable (settling convention). Holland H1/H2 not estimable and not shown.
