

Plain note (ASD-STE100): This chart shows the paths of the aircraft when it must fly along one of six routes that the author chose before the analysis. Each route goes through named airway points and then turns south. The satellite data are applied in the same way as in run C. The data at 00:19 are only the two time values, as Davey used them. This run does not give a cause for the 00:19 log-on. The physics of the flight on one engine is provisional. The result is converged (split-half 0.980). Panel a shows a sample of the paths. Panel b shows where the paths cross the 00:11 arc, and the area of the 00:19 position. The lines in panel a join the positions at 10-minute intervals. Thus they cut the corners of the turns.

Technical note: run G (server-g-routes.toml), binary 28f46c7; stack davey2016-inmarsat + no-exhaustion-prior + s1-s6 fuel + reference-snapshots + radar-full + s7-single-engine + s8-hold-taper (PROVISIONAL) + inop-flow-fix (internal-v1, inop_flow_scale 0.5) + waypoints routes family with turn_backs (overshoot rule); routes 10, 11, 3, 2, 19, 43 at equal prior 1/6; prior 18:01:49 5.6248N 99.0482E, track 289.7 ± 1.0° (Davey Fig. 4.2); 8 seeds × 3M particles, 16 equal tempering stages (run C sampler); 00:19 data = m0019a and m0019b BTO, no 00:19 BFO; log-on cause not modelled; family ln Z −129.55 (seed sd 0.03); split-half 0.980, mean over 35 balanced partitions, 8-seed floor 0.924. Panel a: 384 of 16,000 posterior route samples (2,000 per seed), 18:01:49 to 19:51:49, grouped by turn fix by nearest-polyline fit; legend shares are from the route identifier in final.npy (geometric grouping gives ANOKO 0.909, IGOGU 0.090). Panel b: 00:11 points are the route samples interpolated to 00:10:59; grey open circles are run D free-flight samples within 4 NM of the NILAM–ANOKO line to 19:11:49 (n = 1,081); 00:19 contours are 50 %/95 % highest-density regions of the pooled 0.25° map. Lines in panel a join 600 s route vertices (chords cut the turn corners). Arcs at 35,000 ft, for orientation. Land: Natural Earth 1:110m.
