

Altitude from the 22:41 hand-off to impact: representative descents, V2-broad and V2u

— onset: anticipatory --- onset: fuel cue — onset: flame-out-associated cruise to onset (core-flown; drawn flat at takeover altitude)

Runs: eof-2241-broad-v2-s1, eof-2241-broad-v2u-s1, seed 1 (terminal stage on core 'reference-289', hand-off m2241, prior track 289.7 deg). 100,000 parents x 2 children x 4 descents per arm; traces from a hash-selected subset (traces-dense.csv), joined to their impact rows. Labels: SMOKE; UNCORRECTED FUEL (22:41 fuel state, audit F1-F4); PROVISIONAL SAMPLER (22:41 population before core request 17). Descent burn with the ICAO EEDB Trent 892 idle floor. Point-mass descent; PROVISIONAL dive class; Boeing-calibrated glide band. Code 1a5f1689-dirty. PROVISIONAL-OVERNIGHT envelope overlay smoke/v2-broad.toml on both runs (deliberate onsets start in control: ditching 0.6 / maintained-then-lost 0.4; anticipatory lead [0, 9000] s truncated at 22:41, so uniform on [22:41, predicted exhaustion]; control loss after U[30, 5400] s; powered shapes continuous/emergency/stepped 0.25/0.5/0.25; second level-off p = 0.6; level-off candidates 10,000 ft, 4,000 ft, U[11,000, 30,000] ft). V2u = anticipatory onset only (smoke/arm-v2u.toml). Binary built from the module tree with uncommitted hooks powered_shape_weights / deliberate_control_weights (defaults byte-identical).
