00:19 values held out: the ten best blocks are a mix of searched and unsearched ground in every version

Pipeline test, before calibration, not for release. 00:19 values held out (transmission imposed). Source: composer views v3.2 on run J (private re-run, identical to published), core + drift finds + searched areas (per-cell detection V1 central; Ocean Infinity 2018 and 2025–26 included, grade C), settled seabed; Australian non-finds = populated coast only (nearest stored column to the 17 Oct scheme). Blocks = 2 × 2 equal-area cells (about 3,100 km²), ranked by posterior mass, numbers = rank. Block colour by existing coverage: below 0.1 unsearched, 0.1–0.5 partly, at least 0.5 searched. Technical: products DS, ApopS, DSP, ApopSP; coverage $1 - \Pi(1 - c_i)$ over Phase 2 (per cell), OI 2018 (0.889), OI 2025–26 (0.7808); planned block = community tracing (grade C).
