

00:11:49 (posterior routes, 6th arc)

00:19:37 (final posterior, 7th arc)

Runs families-{repro-radar, free, routes, descent-climb}, 9 Oct 2026, binary 5aee2bb (gated), seeds 1-4; particles per seed: Davey dynamics + radar 0.875M, free 3.5M, routes 1.75M, descent-climb 0.875M. Config: davey2016 + no-exhaustion-prior + reference-snapshots + radar-full + family overlay. Prior 18:01:49 at 5.6248N 99.0482E, track 289.7 +/- 1.0 deg. Radar scored inside the likelihood: fixes 18:04:14, 18:05:15, 18:07:16, 18:13:36, 18:22:12 (10 NM past MEKAR on N571) plus four N571 track points, 10% outliers at 50 NM. 00:19:37 = final posterior (BTO+BFO, 7th arc); 00:11:49 = stored posterior routes (2,000 per seed, unweighted). PROVISIONAL: uncorrected fuel model (audit F1-F7: inverted factor, no temperature term, table edges, ceiling) with power required to 00:11; sampler ancestry defect in tempered epochs (core request 17); STK/SGP4 ephemeris. P = family probability, equal prior odds, from log of mean evidence over seeds. Mixture = P-weighted sum of family densities.
