

Ocean-product choices move floated classes by $\leq 19\%$, dense ones by $\leq 2\%$; seabed and density by $< 0.5\%$

(a) dot = posterior-median impact point 37.125 S, 89.875 E; line = range over four points (posterior p10, mode, p50, p90 latitude; 295.66° prior map, superseded on re-run).
 (b) median over the four points of variant + baseline at matched draws 0-511; printed where $\geq 5\%$ from 1. Baseline: GLORYS12V1 column and surface current, ERA5 wind, AusSeabed/GEBCO.
 Breakup table PROVISIONAL (educated estimates); baseline 1,024 draws per point and family; dive class absent from the end-of-flight hand-off.
