Where the wreckage is on the seabed, all types of flight end, with the extra northern flights and better sampling of A1

The part A1 (cruise to fuel exhaustion, then no control) comes from two extra runs that sample only A1

Summary (STE): Grey areas show where the wreckage is on the seabed. Dashed orange lines show where the aircraft hit the water. Each map uses one way to read the 00:19 satellite data. Two extra flight-end runs sample only the case 'cruise to fuel exhaustion, then no control' (A1); their results replace that part of the main flights, and a known weight keeps the probabilities correct. Some parts of the flight model are provisional. When the aircraft breaks up in the air, the model still puts the wreckage at one impact point. Search results and debris drift are not used here.

Technical: Settled-mass seabed density (GLORYS12V1 75-115 E, 45-10 S, TEOS-10; ERA5; AusSeabed then GEBCO_2026), settling 9330d4c, breakup table PROVISIONAL, afloat pieces excluded. Impacts: end of flight's rule-B reduced table (run J waypoints production + northern supplement + extra descents; mh370-eof-rj1) outside the A1 strata, plus branch 1 (flame-out-associated onset, no intervention: run-j-a1branch seeds 1-8 + north-k2-a1branch, rule B, N1 = 799999, N2 = 800,004, K = 2) and branch 2 (recovery attempted, A1 part: run-j-a1outside seeds 1-8, run J paths only), stratified estimator Z(d, A1) = Z(D0') [P1 E1 + P2 E2], P1 = 0.0928, P2 = 0.1008 (end of flight, 45ea4af0). Both causes q = 1/3 with C2 silent ('other log-on cause only' = C2-silent arm); D3 = R600 BTO + both BFOs as recorded; D4 = both BFOs, Holland transient bias added; D5 = R600 BFO as recorded + R1200 BFO, Holland transient bias added U[17, 130] Hz; BFO error 4.3177 Hz. Systematic resample, one settling draw each. 0.02 deg grid, Gaussian 0.1 deg, HPD. Row ESS by Kish; below 1,000 not estimable. Held Out is D0'. Prior track: core run J waypoint routes. Labels: core run J split-half accepted as a pass by project ruling, 16 Oct 2026; uncontrolled-arm dynamics not calibrated; piloted-turn model and INTERIM pitch-down PROVISIONAL; breakup rows settled from the intact impact point (G-bf); P(left) = 0.8 PROVISIONAL; Mac.
