Aqua MODIS, 19:10 UTC 7 March 2014: no contrail visible in the split-window infrared image

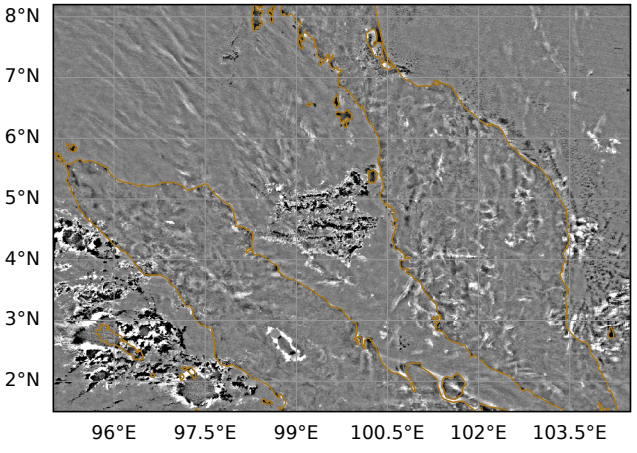

Likely aircraft area: image only

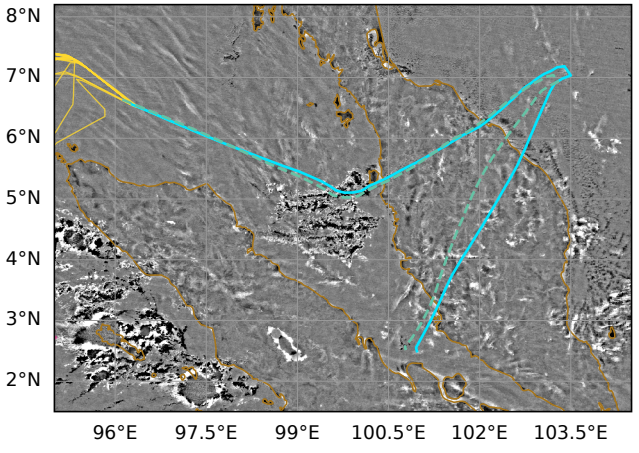

Likely aircraft area: with overlays

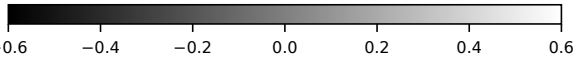

Radar-tracked flight area: image only

Radar-tracked flight area: with overlays

Local anomaly of the 11-12 um brightness temperature difference (K)

- likely aircraft position at the scan time (2,000 posterior samples)
- where a contrail up to 60 min old would lie (35 posterior routes, FL350 wind)
- where a contrail from the radar-tracked flight would lie, FL350 wind
- same, FL400 wind

Plain note: heat picture from Aqua at 19:10 UTC. The pink dots are the likely aircraft positions. No contrail line is visible. The air was too warm for a contrail at FL350, so this is a weak test.

Technical note: MODIS bands 31 (11.0 um) minus 32 (12.0 um), Collection 6.1 L1B (MYD021KM.A2014066.1905/.1910.061 with MYD03; LAADS); BT by inverse Planck at band-centre wavelengths 11.017/12.032 um (absolute BTD bias possible, local anomaly unaffected). Scan 19:10:29-19:10:34 UTC at the posterior; scan angle 24.4 deg; pixel 1.11 x 1.25 km; parallax 5.5 km; Sun -71.1 deg, Moon -27.5 deg. Radar-tracked flight inside the swath with contrail ages 48-148 min. Posterior: run J, BTO+BFO case (waypoints 0.9982, free 0.0013, reproduced-radar 0.0003, descent-climb 0.0002; 148,000 routes, linear interpolation between 600 s vertices); radar-tracked flight 16:42:27-18:22:12 from the Geoscience Australia digital military radar track. Positions use the granule's own scan time at each position and a parallax shift for FL350 (away from the sub-satellite point by 10.67 km x tan(view zenith)). Contrail loci use no contrail spreading; drift = ERA5 wind at FL350 (238.4 hPa) or FL400 (187.5 hPa) x contrail age. Image: brightness temperature difference minus its 21-pixel running median, on a 0.01 deg (VIIRS, MODIS) or 0.02 deg (AVHRR) nearest-neighbour grid. ERA5 (Schmidt-Appleman, efficiency 0.3): no contrail formation at FL300 or FL350 at this time; formation at FL400 but ice relative humidity < 100 %, so no persistence.
