

MH370 conditional impact-location sensitivities

Dynamic ERA5 atmosphere · Martin Trent-892 LRC fuel conditional · corrected R600 BTO only

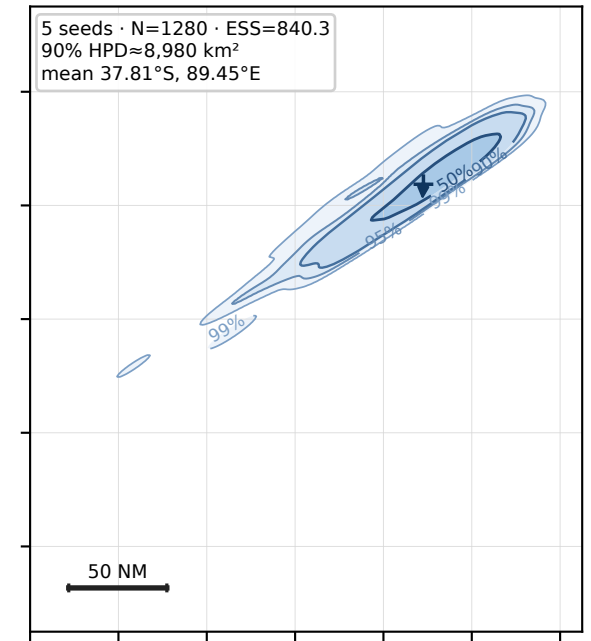

P Arc-1 fuel · current OpenAP polar · best glide · equal feed

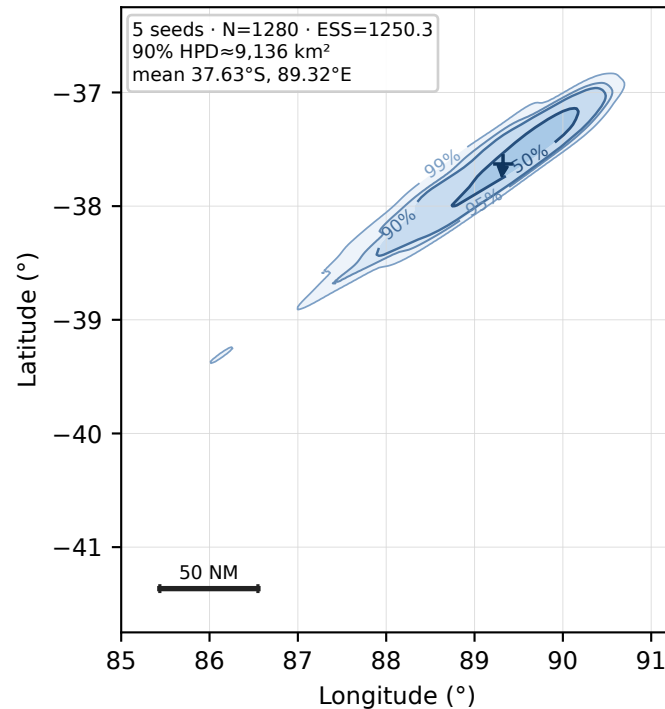

F Final ACARS fuel · current OpenAP polar · best glide · equal feed

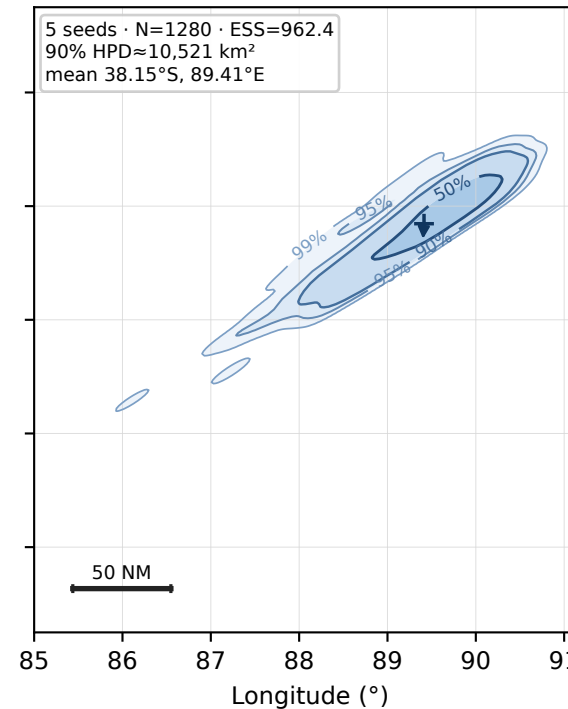

A Arc-1 fuel · published 2020 polar · best glide · equal feed

C Arc-1 fuel · current OpenAP polar · CL 0.30 · equal feed

E Arc-1 fuel · current OpenAP polar · best glide · left first by 10 s

Scientific boundary

Each panel pools five numerical seeds equally, then is normalized independently. No probability or averaging across terminal families is shown.

R600 BTO is the only new SATCOM likelihood; R1200 BTO is held out, and final BFO/log-on timing do not update weights. OpenAP is an attached-flow proxy, not calibrated B777 terminal aerodynamics. Attitude and water-contact duration remain unresolved.
