

Cape Leeuwin publication-trace peak and surrogate-noise controls

A. Cape Leeuwin features around the visually selected 00:47–00:50 window

B. Late Cape Leeuwin features near the end of Figure 9c

IAAFT surrogates preserve each panel's amplitude distribution and approximate spectrum. The 00:47–00:50 interval was selected after inspection; p-values are exploratory, not receiver false-alarm rates.
