

Diego Garcia stronger periodic-airgun suppression sensitivity

D: median control-pulse RMS removed 8.8% (rank 8) versus 28.6% (rank 20)

E: median control-pulse RMS removed 12.1% (rank 8) versus 26.5% (rank 20)

UTC on 8 March 2014

Grey gaps exclude scores within ± 3.0 s of observed pulse centres: the ± 1.0 s raw-pressure mask plus the 2 s half-width of the longest energy window.
In the synthetic held-out-cycle control, median injected-amplitude recovery falls from 97% at rank 8 to 85% at rank 20; stronger suppression can erase real coincident energy.
