Kadri Table 1 bearings cross independent PDF support

All

DG features remain periodic-airgun confounded

Candidate / status	CL / H01W arrival	DG / H08S arrival	Implied impact UTC	7th-arc latitude	Independent PDF HPD	What the traces show · critical limitation
A · Kadri Table 1 00:49:58 Kadri catalogue only	00:49:58 260.41° bearing	Predicted 01:04:50–01:11:05	00:22:30 – 00:30:19	35.88°S · on arc	64% HPD	No corresponding peak recovered from the published H01W trace. Entry exists in Table 1; conditional DG window is not a detected counterpart.
B · Kadri Table 1 00:53:31 Kadri catalogue only	00:53:31 257.58° bearing	Predicted 01:07:50–01:13:36	00:26:03 – 00:33:52	36.74°S · on arc	40% HPD	No corresponding peak recovered from the published H01W trace. Entry exists in Table 1; conditional DG window is not a detected counterpart.
C · Figure 9 rectangle 1 00:52 cluster Visible H01W feature	00:52:00 reported 00:52:04.35 q99 peak	None reported 01:10:00.50 is post hoc	00:24:36 – 00:32:26	No southern intersection	n/a · bearing misses arc	Strong H01W local-energy feature is visible near the published rectangle. Reported 57° bearing is incompatible with the southern arc and the OSCAR direction.
D · Kadri preferred 00:54:30 / 306.18° Published preferred candidate	00:54:30 reported local score below q99	No identified counterpart 01:12:29–49 is periodic	00:27:02 – 00:34:51	25.79°S · on arc	Outside 99% HPD	Kadri-labelled feature; our local-energy screen does not exceed panel q99. Bearing intersects far north of the independent high-density region.
E · OSCAR timing pair post hoc boundary audit Exploratory two-station pair	00:52:04.350	01:10:00.500	00:29:39.354 – 00:29:43.911	35.35°S · 65 km off	70% HPD	Strong CL feature plus a cropped DG panel-boundary segment. DG segment lies in the airgun cadence; matched-window p=0.632.
F · 00:54:27 / 01:12:49 full-grid timing pair Exploratory two-station pair	00:54:26.950	01:12:49.300	00:32:12.065	35.46°S · 37 km off	52% HPD	Spatially compatible timing pair; DG cycle is among the pulse-tail leaders. Complete pulse/time-slide search p=1.000; not an association.
G · DG-only screen 01:03:13 Periodic DG context	No selected CL counterpart	01:03:13.15 rank-8 residual < q99	00:19:20 – 00:24:12	Not localised	Not localised	Elevated plotted segment, but not q99 after the control-selected filter. Inside the approximately 9.93-second periodic airgun train.

Broad conclusion

The 00:49:58 and 00:53:31 bearings are spatially interesting, and the 00:52/00:54 timing clusters contain visible energy. However, no CL–DG pairing survives trials correction; all plausible DG counterparts remain embedded in the measured periodic train.

How to read the numbers

Arrival-to-impact intervals use the independent integrated spatial PDF and 1.43–1.57 km s^{−1} celerity. HPD is evaluated at the bearing–arc intersection or representative timing-source point; a lower percentile means higher density. Timing-derived points and bearing-derived points are conditional alternatives, not a fused location.
