

Current hydroacoustic candidate context at H01W and H08S

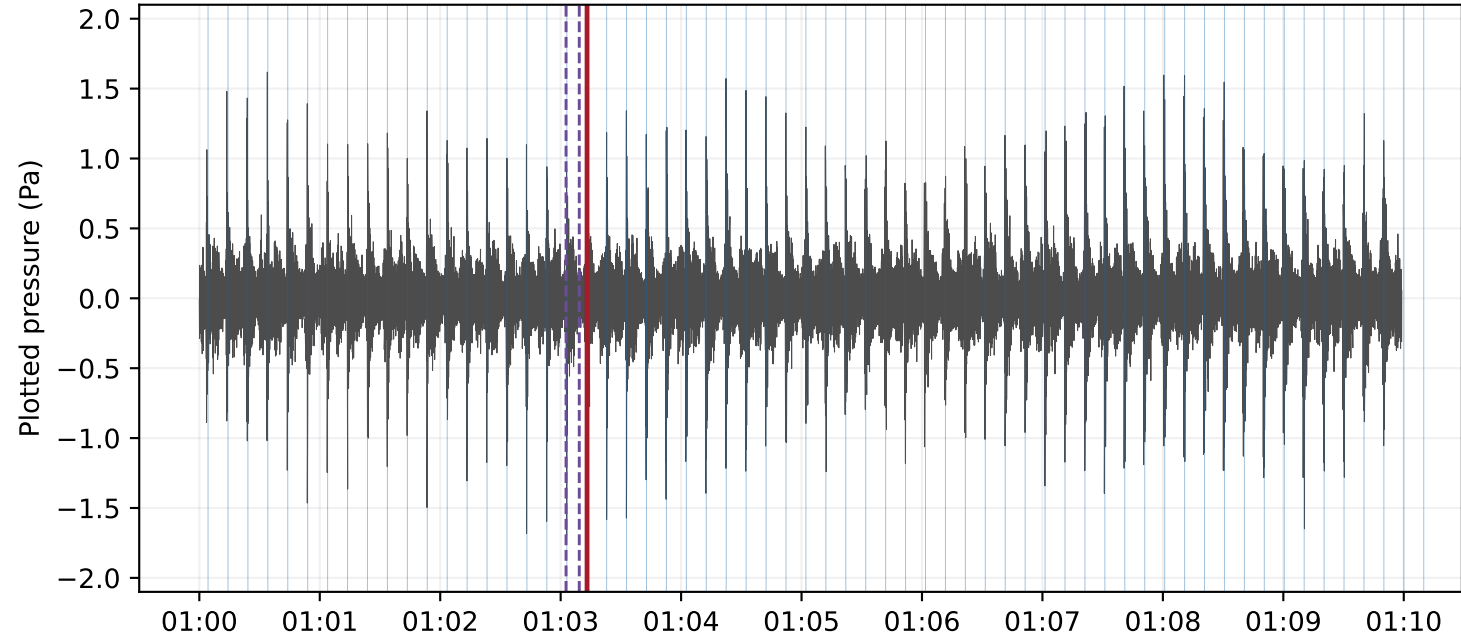

A. H01W: Figure 9 signals and independently screened times

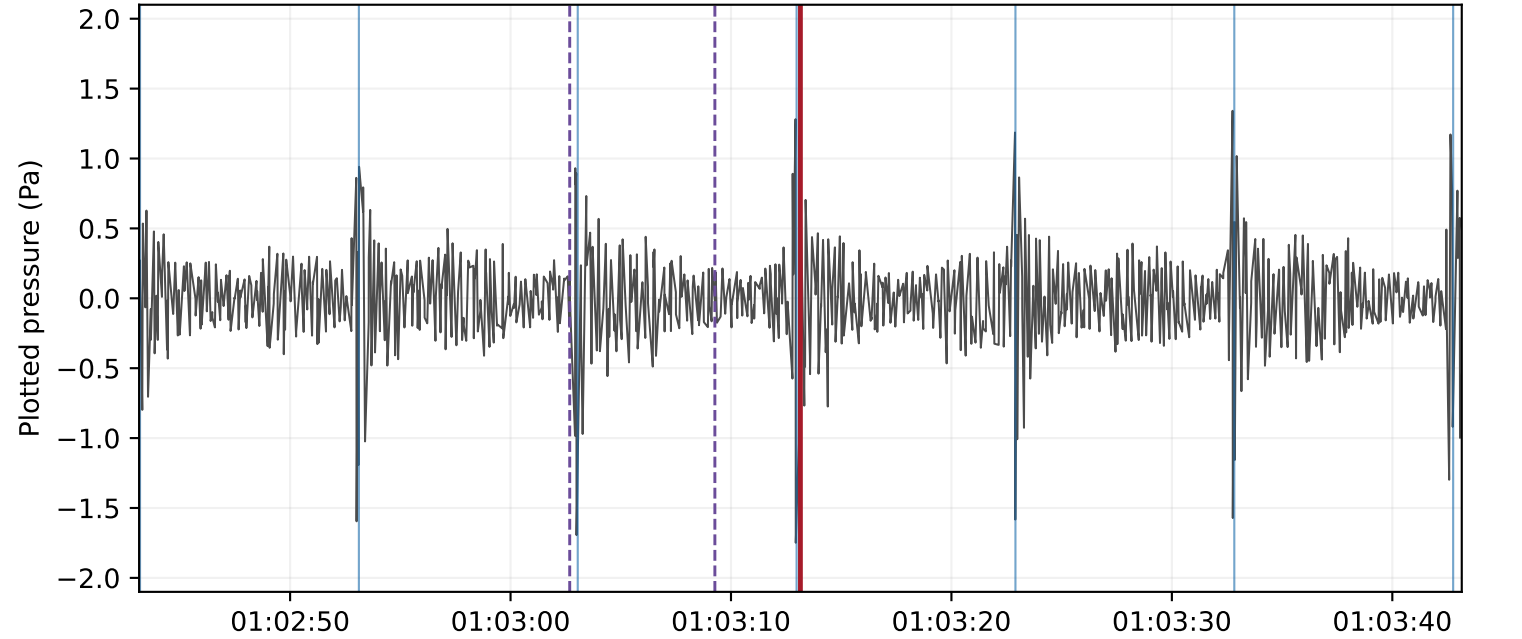

B. H01W: the 00:47:01.7 screen is panel-edge affected

C. H08S: 01:03:13.15 lies in the periodic airgun train

D. H08S detail: timing compatibility is not source identity

— Kadri Figure 9 vector trace — Figure 9 rectangle 1 time (approximate) - - - model-conditioned median arrival
— independently screened time — Table 1 major-candidate time — leave-target-out periodic prediction

The plotted traces have already been filtered and rendered for publication. They cannot establish event identity, bearing, array coherence or detection probability.
