

MH370 flaperon source-area comparison

Native GLORYS12 daily currents only plus adaptive SMC; matched without Stokes or direct windage

What changed in the source-area shape

Current screen vs no isotope
TV = 1.21e-08
No compatible path receives a boost
Entropy-effective cells: 5.9 → 25.2

Dagnostic only: mean importance-weighted termination is 1.1%; motion and recovery-kernel calibration limitations remain. Published lanes are context, not pooled evidence.
