

# MH370 conditional impact families: CL and DG arrival-window predictions

PREDICTIVE ONLY — no observed-signal likelihood and no posterior reweighting

Cape Leeuwin H01W  
posterior-predictive arrival geometry

Diego Garcia H08S  
posterior-predictive arrival geometry

Best arrival to 95th percentile latest arrival using 1.45–1.55 km/s. Diamonds: not an intermediate point. Amplitude withheld because attitude/contact duration, path transfer, and station response are generic conditional predictions. Path impact dynamics are generic conditional predictions.
