

MH370 flight-assumption pre-analysis

Conditional feasibility examples • marker density is not probability • empty space is unresolved

Example trajectories and their 00:11 endpoints

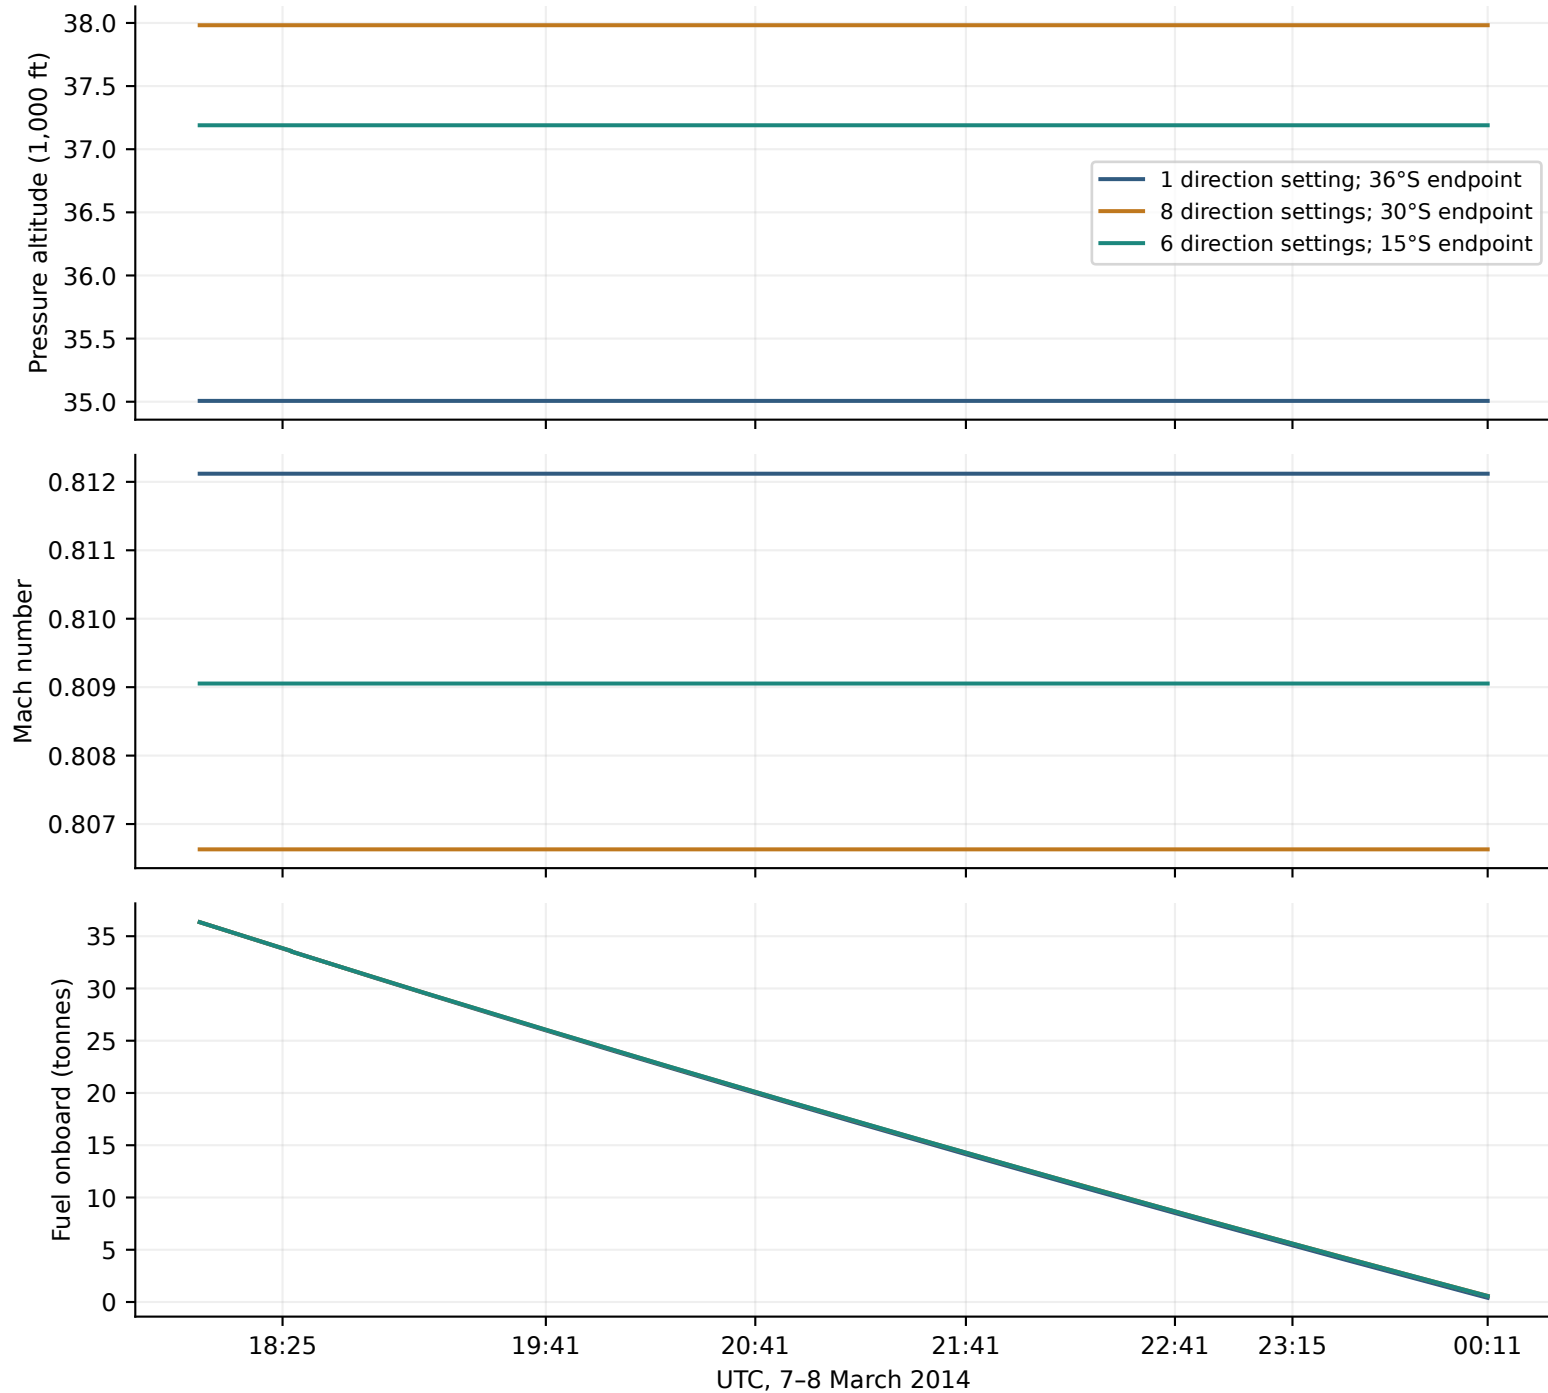

Demonstrated endpoints as allowances increase

Nominal fuel proxy; declared restart delay 30–300 s. All shown examples pass BTO/BFO checks at three integration resolutions. The earlier radar-to-18:25 segment, performance bounds, weather and fuel assumptions remain conditional. No later location evidence is enabled.

Wider examples with steady cruise targets

These selected examples keep cruise targets constant. Separate 2/4/8 speed and altitude adjustment tests are included in the comparison. Constant cruise is a conditional subset, not a preferred pilot behaviour.
