

Published Pléiades PCA Panels and Lowest PCA-Loss Category Proxies

Five retained PHR_4 rating-5 objects; every image field is 24 m × 24 m and carries the same 5 m ruler.

Simulated colours and loss-equivalent orientations are display proxies; PCA loss is 1 – reflected PCA-mask IoU after the strict area-length-width gate. Red cells are closest-size displays only.

Gold borders mark the lowest eligible category. Eligibility is two-sided: area, length and width must each fall between the audited lower and upper limits.
