

Published Pléiades PCA Panels and Lowest-Loss Category Proxies

Five retained PHR_4 rating-5 objects; every image field is 24 m × 24 m and carries the same 5 m ruler.

Simulated PCA colours and loss-equivalent orientations are display proxies; all losses use the two binary masks and strict area–length–width gate. Red cells are closest-size displays only.

Gold borders mark the lowest eligible category. Eligibility is two-sided: area, length and width must each fall between the audited lower and upper limits.
