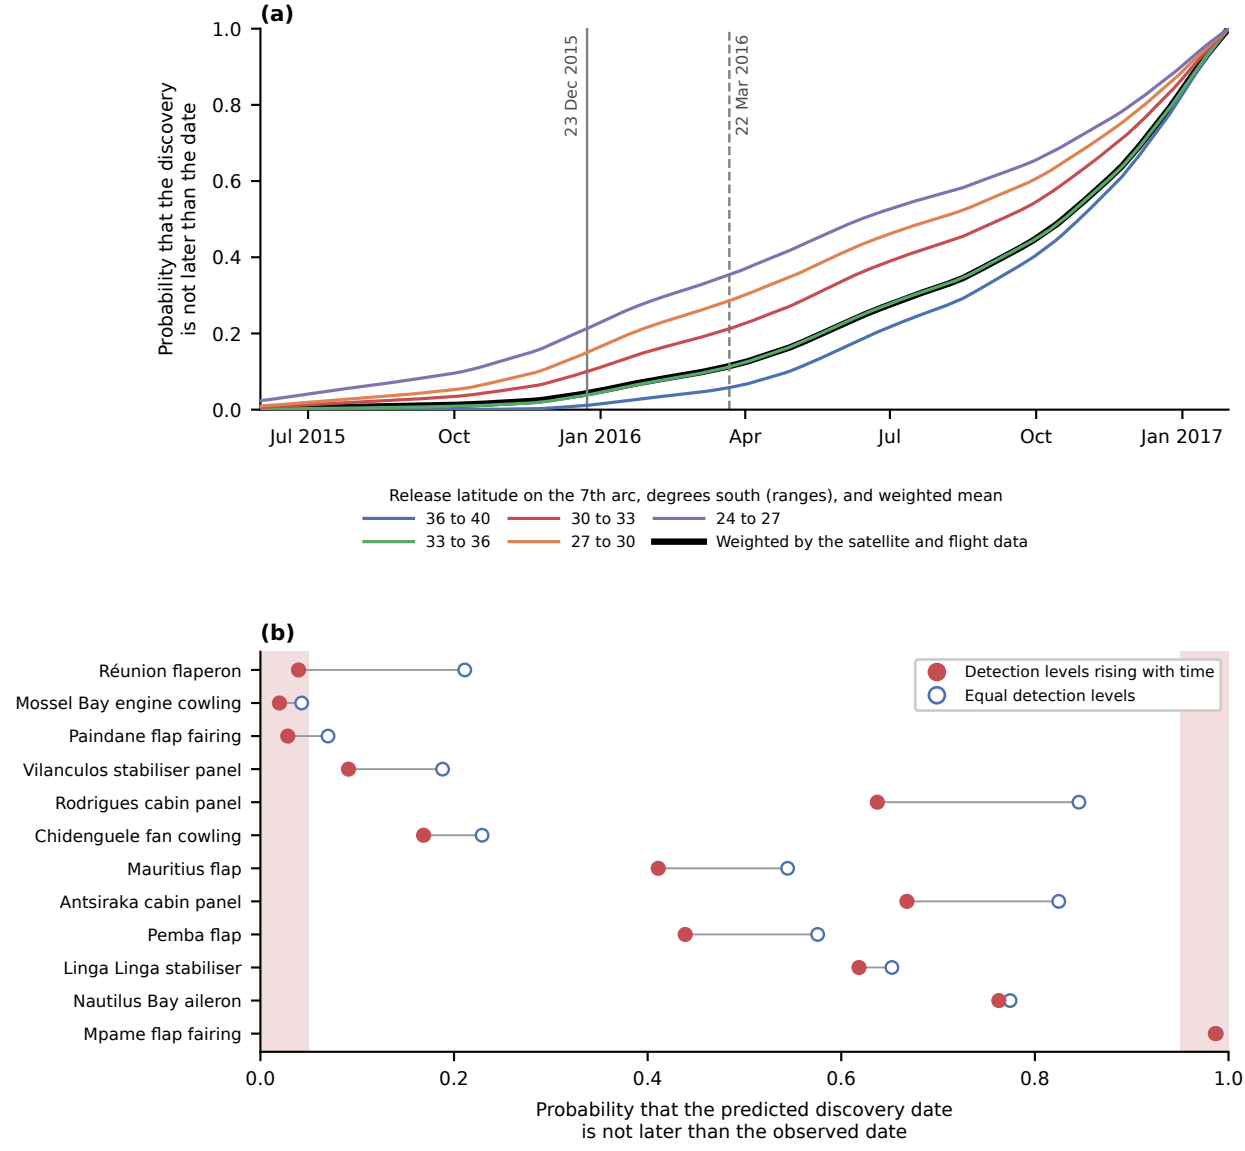
Cowling found at day 655; model median day 955; probability of a find this early 0.04



Notes. Drift: GLORYS12V1 and GlobCurrent ocean models with ERA5 wind, 84 release points from 40.25 to 19.92 S, 16 ocean samples (32 south of 33.25 S), 6250 particles per class; kernel 50 km; discovery delay exponential, mean 60 days; arrival times from the stored beachings (83.4 and 81.4 million records), reproduced the module coefficients of the nine finds to a relative difference of 2e-8. Rising detection levels: medians 0.1, 0.5, 1, 1 (provisional). Release latitude weights: end of flight, Davey model with fuel, log-on event only. Mossel Bay date of find 22 Mar 2016 (ATSB); photograph 23 Dec 2015.
