Where the wreckage is on the seabed, for each use of the 00:19 satellite data (waypoint routes; better sampling of uncontrolled flight)

All types of flight end; the part 'fuel exhaustion, then no control' comes from an extra run that samples only that part

Summary (STE): Grey areas show where the wreckage is on the seabed. Dashed orange lines show where the aircraft hit the water. Each map uses one way to read the 00:19 satellite data. An extra flight-end run samples only the case 'fuel exhaustion, then no control'; its results replace that part of the main run, and a known scale factor keeps the probabilities correct. Some parts of the flight model are provisional, so these areas can change. When the aircraft breaks up in the air, the model still puts the wreckage at one impact point. Search results are not used here.

Technical: Settled-mass seabed density (real ocean: GLORYS12V1 column 75-115 E, 45-10 S, TEOS-10; GLORYS12V1 surface current; ERA5 wind; AusSeabed then GEBCO_2026), settling 9330d4c, breakup table PROVISIONAL, afloat pieces excluded. Impacts: end of flight run J waypoints stratum only (conditional on it), binary mh370-eof-rj1, EoF tools 4605cc21: 24 production seeds outside the branch (onset flame-out-associated, no intervention) plus the A1-branch conditional pass (8 seeds x 100,000 hand-off particles, prior conditioned on the branch, D3-aimed scored selection with exact correction, seeds 2-8 Horvitz-Thompson thinned) with mass x 0.1411 = M_prod(D0', branch) / S_pass(D0') (stratified estimator; P_D0'(branch) = 0.0935). Row mass = end of flight's 00:19 two-factor table (option_table_0019 seed_terms; per-seed ln Z reproduced to 4e-15): hand-off weight x survival x L(D) x L(cause); both causes q = 1/3 with C2 silent, W = 00:10:58-01:15:56. D3 = R600 BTO + both BFOs as recorded; D4 = both BFOs, Holland transient bias added; D5 = R600 BFO as recorded + R1200 BFO, Holland transient bias added U[17, 130] Hz. Systematic resample, one settling draw each: 40,000. 0.02 deg grid, Gaussian 0.1 deg, HPD. Row ESS by Kish; below 1,000 not estimable. Held Out is D0' (impact after 00:19:37.443 imposed). Prior track: core run J waypoint routes. No search evidence, no drift evidence. Labels: core run J split-half accepted as a pass by project ruling, 16 Oct 2026; uncontrolled-arm dynamics not calibrated (Boeing leave-one-out gate failed); piloted-turn model and INTERIM pitch-down PROVISIONAL; in-flight structural outcome PROVISIONAL; breakup rows settled from the intact impact point (G-bf); P(left) = 0.8 PROVISIONAL; Mac.
