

Observation coordinates, not impact origins

Pléiades + Possible COSMO-SkyMed Radar (all four)
Equal model mixture | COSMO: 21 March assumption

50:50 mixture of normalized sensor PDFs; BRAN2016, OSCAR v2 Final and GLORYS12 + WAVERYs each weighted 1/3.

Pléiades: 23 March 04:00 UTC; possible COSMO: assumed 21 March 04:00 UTC. Star: grid-cell mode; contours: 50%, 90%, 95%.

Conditional transport-compatibility PDF; no debris-identity probability or background false-detection denominator. Search overlays do not reweight the PDF.

Dashed grey curve: FL400 seventh-arc reference. Same probability surface and colour scale in both versions.
