

RNZAF-labelled image GPS metadata in seventh-arc and Pléiades context

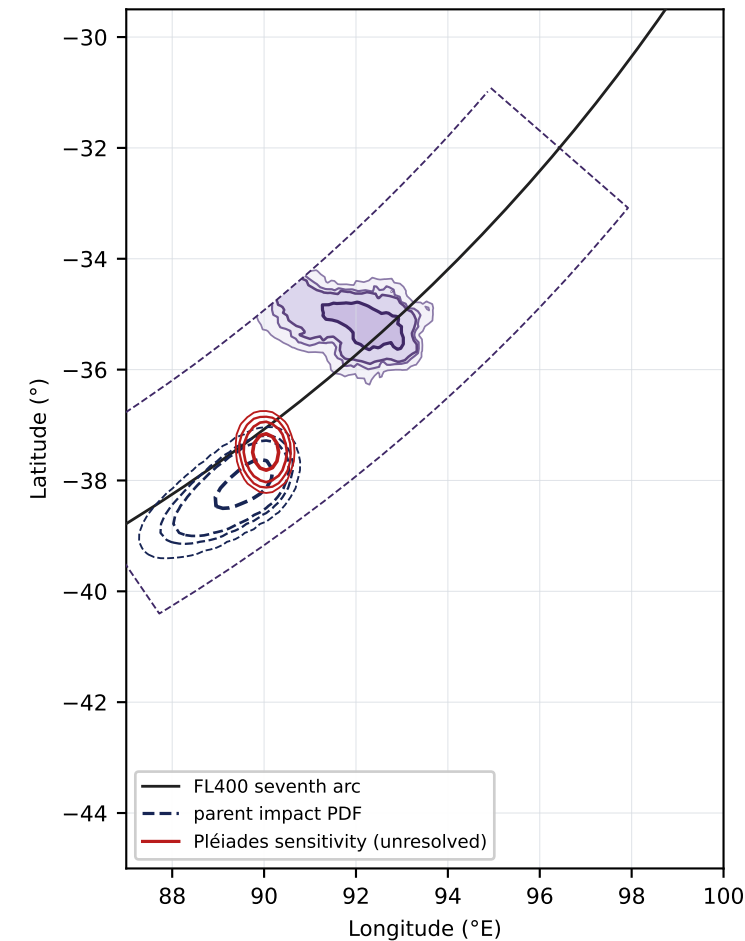

A RNZAF metadata locator
marker area scales with image multiplicity

B Pléiades conditional proxy: equal_transport_family_model_average
50/90/95/99% HPD; uncalibrated sensitivity

C Impact-particle comparison
numerically unresolved · display only · conditional ESS 1.15

Coordinate suffix corrections affect six rows where latitude carried E and longitude carried S; numeric columns were retained. RNZAF timestamps lack a declared time zone, datum, altitude, orientation/FOV, outcome, and completeness statement. Pléiades components are alternative transport families; this figure applies one named surface only. Panel C conditional ESS is 1.15; its red contours are numerically unresolved and display only.
