

Residual origin density after searches found no wreckage

Pléiades + all four Possible COSMO-SkyMed Radar contacts | COSMO: 21 March | equal three-model mixture

Both updates marginalize illustrative coverage and detection ranges. Dependent misses give no extra detection credit for overlapping campaigns; independent misses multiply campaign failure probabilities. Neither treatment deletes searched areas or applies future searches as negative evidence.

--- OI 2018 envelope — OI recent southeast band --- Possible remaining northwest band

OI outlines are approximate; ATSB coverage is incorporated from the published footprint mask. Contours: 50%, 90%; star: grid-cell mode. Same colour scale.

Conditional sensitivity analysis, not a calibrated MH370 location posterior. Unknown debris identity, search geometry and spatial detection quality remain material.
