Where and when each candidate idea puts the impact, and what tonight's searches of the published traces say about it

Hypothesis and source	Implied position	Implied impact, UTC	Arrival(s), UTC	Our trace assessment (22 Oct searches)	Coupling needed	Bearing consistency
A · Catalogue entry 00:49:58 (260.41°) Kadri (2024) Table 1, p. 14	35.87°S 91.45°E (bearing line meets the arc 4.6 km off)	00:26:48 (00:26:37–00:26:59)	H01W 00:49:58; no Diego Garcia counterpart identified	No candidate within 10 s. Window 00:49:22: matched filter p 0.55, STA/LTA 0.96, band 2–5 Hz 0.89. Impact time inside the 50 % band (00:19 data not used).	— (no signal)	Bearing points into the run J impact region: log10 Bayes factor +1.16 (favoured).
B · Catalogue entry 00:53:31 (257.58°) Kadri (2024) Table 1, p. 14	36.74°S 90.29°E (bearing line meets the arc 4.0 km off)	00:29:14 (00:29:02–00:29:25)	H01W 00:53:31; no Diego Garcia counterpart identified	No candidate within 10 s. Window 00:53:02: matched filter p 0.95, STA/LTA 0.99, band 2–5 Hz 0.90. Impact time inside the 50 % band (00:19 data not used).	— (no signal)	Bearing points into the run J impact region: log10 Bayes factor +1.49 (favoured).
C · Cape Leeuwin 00:52 cluster (text time 00:52:03) Kadri (2024) Fig. 9(c) rectangle 1, p. 9; Table 1 caption, p. 14	No crossing of the southern arc for the 57° bearing of the text (it points north-east); for 306.18° see D	Unresolved (no mapped source position)	H01W 00:52:03 (Kadri); our peak 00:52:04.35	Matched filter p 0.043 at 00:52:04 (the only Cape Leeuwin value below 0.05: 1 of 120 tests, 6 expected by chance); STA/LTA 0.42; band 2–5 Hz 0.88. Inside every option's 99 % arrival window.	0.026 for the median impact (126 x the provisional F-35A value)	57° (text) gives no arc crossing; 306.18° (Table 1 caption) gives row D.
D · Preferred candidate 00:54:30 / 306.18° Kadri (2024) Fig. 9(c) rectangle 2, p. 9; Table 1, p. 14	25.68°S 101.31°E (bearing line meets the arc 8.6 km off)	00:36:30 (00:36:22–00:36:39) at the caption time; 00:34:03 at the text time	H01W 00:54:30 (caption) or 00:52:03 (text); no Diego Garcia counterpart identified	Matched filter p 0.123 at 00:54:29 (screen level); STA/LTA 0.60; band 5–9 Hz 0.47. Likelihood with the IMOS loggers: ln Bayes factor −0.004 (uninformative; only Perth Canyon 3376 recorded at the predicted time).	0.024 for the median impact (113 x the provisional F-35A value)	Bearing test log10 Bayes factor -0.49 (uninformative).
E · Timing pair H01W 00:52:04.350 x H08S 01:10:00.500 Kadri (2024) Fig. 9(c, e), p. 9; project analysis, not a source identification in the paper	36.14°S 91.13°E (lag 1,076 s; predicted lag range 809–1,536 s)	00:28:36 (00:28:25–00:28:47)	H01W 00:52:04.35; H08S 01:10:00.5	H01W as row C (p 0.043). H08S 01:10:00.5 lies in the gap between the scored windows of panels d and e (panel edge, cropped segment): not scored, so not in tonight's pair list.	H01W 0.026; H08S not scored	Locus at 259.5° from H01W and 151.7° from H08S. Kadri's 306.18° is 47° away.
F · Timing pair H01W 00:54:26.950 x H08S 01:12:49.300 Kadri (2024) Fig. 9(c, e), p. 9; project analysis, not a source identification in the paper	35.79°S 91.64°E (lag 1,102 s; predicted lag range 809–1,536 s)	00:31:28 (00:31:17–00:31:39)	H01W 00:54:26.95; H08S 01:12:49.3	Pair found tonight (matched filter rows 00:54:29, p 0.123 x 01:12:49, p 0.039; lag 1,100 s, inside the predicted range). The airgun-suppressed Diego Garcia residual does not keep the 01:12:49 row (p_B 0.30).	H01W 0.024; H08S 1.5	Locus at 260.7° from H01W and 150.7° from H08S. Kadri's 306.18° for 00:54:30 is 45° away.
G · Tonight's strongest two-station pair H01W 00:52:04 x H08S 01:12:49 Digitised Kadri (2024) Fig. 9(c, e); searches and composition notes, 22 Oct 2026	33.56°S 94.51°E (lag 1,245 s; predicted lag range 809–1,536 s); second crossing at 20.5°S, grid edge, prior mass < 0.1 %	00:31:41 (00:31:31–00:31:51)	H01W 00:52:04; H08S 01:12:49	Matched filter p 0.043 x p 0.039; the airgun-suppressed residual does not keep the H08S row (p_B 0.30). 19 lag-consistent pairs against 8.8 expected, permutation p 0.019; over 36 receiver-pair tests the smallest p is at or below 0.019 by chance with probability 0.51.	Both stations P_D = 0.5: 0.069 (330 x the provisional F-35A value); single rows H01W 0.026, H08S 1.5	Locus at 268.9° from H01W and 144.8° from H08S. Kadri gives 57° (text) or 306.18° (Table 1 caption) for the 00:52 signal: neither is within 37°. Nearest Table 1 bearing: 00:52:50 at 274.84°, 46 s later (its window: matched filter p 0.51).

Plain note: Each row is one idea about where and when the aircraft hit the water, from Kadri's paper or from our own timing analysis. The columns give the place and time that the idea needs, the times of the signals, what our detectors found in the published traces, how much of the impact energy would have to become sound, and whether the direction from Cape Leeuwin agrees. A p-value near 0.05 among many tests is expected by chance. Row G is the strongest pair of signals found tonight, but its direction does not agree with any direction that Kadri gives.

Technical note: Rows A–F carry the hypotheses of the 21 Oct table; every number is recomputed tonight: positions on the offset-0 arc of the block-2 TL grid (table_points.json); implied impact = H01W arrival − WGS84 geodesic / c, c = 1.482 km/s (range for c = 1.470–1.494, +/- 2 sd); bearing-line loci and Bayes factors from named/table1_verdicts.csv (Student-t(3), sd 3.3 deg, demonstrated error model). The 21 Oct values (column old_21oct of the CSV) differ by up to 1.2 deg in latitude for E and F because the earlier table used another arc and speed. p = per-window p_A of the block-5 panel search on the DIGITISED Fig. 9 traces (panels/panel_windows.csv), matched filter = M1b envelope; H08S p_B = airgun-suppressed residual null. Pair statistics: coincidence/coincidence_summary.csv (H01W x H08S, primary matched-filter family). Coupling needed: eta at which the run J D0′ median impact (1.13 GJ, tau90 3.3 s) gives the observed excess at the station (searches note), and for G the eta at which P_D(H01W) x P_D(H08S) = 0.5 at the pair locus (composition note, alpha 0.05, +4.8 dB triad gain). Bearings measured clockwise from north at the station; recomputed from the triad centroid: G 269.0 deg / 144.8 deg (268.9 deg in the parent check). Kadri bearing: text p. 9 says 57 deg, Table 1 caption 306.18 deg; they disagree. PREDICTIVE, NOT CALIBRATED. C1: propagation slope misfit +10.4 / +7.4 dB per octave at H01W / H08S (after the EW0112 source result a source-term caveat; air9 verdict NOT EXPLAINED, gap G23). C2: coupling efficiency eta not calibrated; swept over four decades; F-35A upper anchor eta = 2.1e-4 is provisional (from Brown 2026's quote of Metz 2023; re-derivation from Metz pending). No detection is claimed.
